Problem with form action & file upload

Test #	Module	@Join path	Form enctype	Form action	File upload works
1	Faces	path = "/upload"	multipart/form-data	/Meteor/upload	No
2		path = "/upload"	application/x-www-form-urlencoded	/Meteor/upload	No
3		path = "/upload/{test}"	multipart/form-data	/Meteor/upload/myparam	No
4		path = "/upload/{test}"	application/x-www-form-urlencoded	/Meteor/upload/myparam	No
5	CDI	path = "/upload"	multipart/form-data	/Meteor/upload	No
6		path = "/upload"	application/x-www-form-urlencoded	/Meteor/upload	No
7		path = "/upload/{test}"	multipart/form-data	/Meteor/upload.xhtml	Yes
8		path = "/upload/{test}"	application/x-www-form-urlencoded	/Meteor/upload.xhtml	Yes

Tested with WildFly CR1, Ocpsoft Rewrite 2.0.10 & PrimeFaces 4.0 (advanced ajax upload).

We can see that file upload works only if form action sets directly to file (like @Join(path = "/upload/{test}", to = "/upload.xhtml")).

We get error if set @Join to @Join(path = "/upload/{test}", to = "/WEB-INF/resources/template/upload.xhtml").
